DIY Garage Door Floor Seal Installation instructions
### VERY IMPORTANT TO READ BEFORE INSTALLATION.

Sweep area before starting installation

1.
The rolled up floor seal may have a memory, roll it out and lay flat ON A CLEAN SURFACE, heat gradually with a hairdryer, (or heat gun) until it is completely flat.
Allow to cool.
(a roller may be used to roll the raised edges while heating with a hairdryer, ensure not to overheat the strip)

2.
Close the garage door. Push the door seal under the garage door from the inside so the door seal ridge is up against the back of the garage door. Using a soft pencil, mark the floor on both sides of the floor seal so that when you remove it you know where to apply the adhesive. The door seal is 2.6m or 5.1m (depending what size you bought) Measure from wall to wall and **cut door seal to size.**
**NB. Do not cut too much off.**

3.
Place masking tape on either side of pencil lines. (Wearing surgical gloves from this point on will ensure you have clean hands.)

4.
Clean and dry the area where you plan to install the door seal. All dirt, water, mud, oil and other debris must be removed. Wiping the area with benzene or alcohol will ensure a clean bonding surface.
**NB! Use personal protective equipment when using chemicals i.e. gloves, mask, glasses etc.**

5.
Apply the adhesive to the floor between the lines, in either straight or zigzag lines.

6.
Press the strip onto the adhesive starting at   one end, slowly forcing our air bubbles as you press the strip down, get someone to hold the long piece up away from the adhesive7.

7.
Run a bead of adhesive along the edge of the door seal. Use your finger or a cloth with soapy water so you can smooth out the adhesive before it starts setting.

Remove the masking tape before the adhesive sets.

Wipe any excess with a cloth and turpentine or mineral spirits.

Close the garage door and in the unlikely event it opens by itself follow door opener manufactures instruction.

NB! DO NOT DRIVE OVER THE FLOOR SEAL FOR AT LEAST 24 HOURS

This is not likely to happen but take note: The garage door may open by itself once the seal has been installed, IF this happens, contact your garage door manufacturer to find out how to set the opener slightly higher to accommodate the seal under the door. The floor seal has been successfully stuck to painted floors and we have not had any problems to date, but unfortunately we cannot guarantee this will be the case on all painted floors as this is dependent on a third party having cleaned the floor properly before painting.
